PROJECTS / OPEN-SOURCE

MERN REAL-ESTATE | [Link](#) JavaScript, Firebase, ReactJS, Redux Toolkit, Mongoose, ExpressJS, TailWind CSS

- A full-stack real estate web application built using the MERN stack (MongoDB, Express.js, React.js, Node.js).
- The application allows users to search for, list, and manage properties.
- Key features include property filtering by price, location, and type, user authentication and authorization.
- The backend manages user data, property listings, and handles transactions securely with RESTful API endpoints.
- Integrated responsive design for seamless user experience across devices.

TODOLIST | [Link](#)

JavaScript, Mysql, EJS, ExpressJs, NodeJS, HTML, CSS

- Developed a full-stack TodoList web application using Express, Node.js, EJS, and MySQL.
- The application allows users to create, update, delete, and manage tasks with a simple and intuitive interface.
- The project demonstrates proficiency in backend development, database management, and front-end templating.
- Implemented RESTful APIs using Express for CRUD operations on tasks. Utilized EJS for dynamic content rendering and template management. Designed and managed a MySQL database to store and retrieve task data.

HONORS & AWARDS

- Participated Hack4Bengal Hackathon
